# Accessibility Templates
Make content accessible to all learners

## Alt Text Generation

Create descriptive alt text for these images:

[Describe images or paste image descriptions]

For each image, write alt text that:
• Describes what's in the image concisely
• Conveys the purpose/function if actionable
• Includes text shown in image
• Is under 125 characters when possible
• Omits "image of" or "picture of"

Example: "Bar graph showing 60% increase in customer satisfaction after training implementation"

Provide alt text for all images.

## Video Caption Script

Create a caption/transcript file for this video content:

[Paste video script or description]

Include:
• All spoken dialogue
• [Sound effect] descriptions
• [Music] cues
• Speaker identification if multiple people
• Timing cues if needed

Format for WCAG compliance and screen reader compatibility.

## Accessibility Review

Review this content for accessibility issues:

[Paste content or describe course element]

Check:
■ Color isn't the only way information is conveyed
■ Sufficient color contrast (text and background)
■ All images have alt text
■ Videos have captions
■ Headings used for structure (not just bold text)
■ Links have descriptive text (not "click here")

- Content works with keyboard navigation
- Tables have proper headers
- Forms have clear labels

List issues and remediation steps.
