AI Narration Guide
Create professional voiceovers with ElevenLabs, Murf, or WellSaid

Preparing Your Script

Before generating audio:

✓ Write conversationally (how you'd speak, not formal writing)
✓ Break into short paragraphs (30-60 seconds each)
✓ Use punctuation to control pacing (periods = pauses)
✓ Spell out acronyms first time: "Learning Management System (LMS)"
✓ Avoid complex sentences that are hard to follow aurally
✓ Add [PAUSE] markers where you want longer breaks
✓ Mark emphasis: Put important words in CAPS or bold

Voice Selection Tips

Choosing the right voice:

• Professional training: Clear, warm, authoritative
• Technical content: Calm, measured pace
• Motivational: Energetic, enthusiastic
• Sensitive topics: Empathetic, gentle

Test 2-3 voices with same script. Pick based on:
✓ Clarity and pronunciation
✓ Natural-sounding delivery
✓ Appropriate tone for content
✓ Consistency across longer narration
